

SMBVR

Q1 | 2022

Small and Medium-Sized Businesses Vulnerabilities Report

The SMBVR is the first cybersecurity research report in the world focused exclusively on small and medium-sized businesses (SMBs) to detect any significant vulnerabilities that an attacker could exploit from the outside.

The focus of the research was to detect any significant vulnerabilities in a SMB's website, software or application exposed to the Internet and visible and accessible to an attacker.

SMB SEGMENTS:

1. Defense Contractors
2. Manufacturers
3. Shipping & Transportation
4. Technology Companies
5. MSPs & ISPs
6. Law Firms
7. Accounting Firms
8. Colleges and Universities
9. Medical Practices
10. Dental Practices

The Q1 2022 SMBVR focuses on 12,050 SMBs spread across 10 SMB types that were randomly sampled in North America. **A newly detected vulnerability, "Session Riding", was discovered at a significant level, along with spoofing, clickjacking and sniffing vulnerabilities.**

NEWLY DETECTED

SESSION RIDING

SPOOFING

CLICKJACKING

SNIFFING

IN THE U.S.

> 50%

> 82%
